DRUM BRAKE LININGS FOR HEAVY DUTY AND COMMERCIAL VEHICLES

unique technologies - premium quality

Tribo has a huge experience in drum brake linings manufacturing. Starting from 1980s, the factory had been supplying various drum linings to OE and aftermarket segments.

Several mixtures of Tribo's own design allow the factory to meet any requirement of its customers, providing a reliable product tested by time.

Asbestos free recipes contain exclusively **high quality components** carefully selected from a wide range of alternatives by the Tribo R&D staff. During the production phase, the Tribo brake linings pass machining and drilling stages, resulting in a fit-to-go product for the end users.

In addition to the core drum linings product range, Tribo offers **various thickness versions** of each of the items, allowing the aftermarket customers to select the proper product for their needs.

Tribo R&D ensures the quality of the products by performing **a complete set of tests** on it using the fully equipped modern lab, including the TecSa TR-2600 dyno stand with drum brake system installed on it.
