Tribo

PRODUCTION

Tribo is the biggest manufacturer of friction and braking components in Eastern Europe with a product range consisting of more than 800 different articles.

TECHNOLOGIES

As a result of Tribo's own high-tec testing lab, the product development specialists are able to develop new, and enhance current formulations and products.

PRESENCE

Tribo exports its products to more than 30 countries worldwide and has affiliates on the EU territory.

DRUM BRAKE SHOES FOR TRUCK AND TRAILER AXLES

unique technologies - premium quality

Among the Tribo product range there are **drum brake shoes for commercial vehicles** (trucks and trailers).

Tribo drum brake shoes provide **effective braking at maximum load** conditions, as well as excellent results at high speed sliding, regardless of the location and climate conditions in which a vehicle brakes.

High precision measurement tools are used to ensure the perfect fit of the lining to the backplate, and special anti-corrosion coating assures the long shelf life of the shoe.

For both backplate and friction lining production Tribo uses various **raw materials of the highest quality** with step-by-step quality control. The result is a product designed to satisfy the Tribo's customers' needs.

The products are being **tested in a modern lab** equipped with a complete range of measuring and computing devices, including the TecSA Tr-2600 dyno stand. Tribo R&D sets strict requirements to the products on each stage of testing, making sure the quality corresponds to both industry requirements and customers' expectations.

TRIBO DRUM BRAKE SHOES FEATURES

STEEL COATING
special powder coating
provides corrosion protection

COOPER-FREE TECHNOLOGY
designed specially to meet
USA market requirements

FRICTION MATERIAL
low-steel provide a stable
friction coefficient at all conditions

READY TO USE
brake shoes assembled allow
you to fit it immediatly
