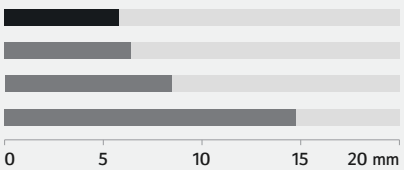
ADAPTATION LAYER
speeds up the adaptation period of the brake pad to the brake disc

EDGE-CONE
enhanced geometry that reduces vibrations and prevents possible friction surface ruination at the beginning of the usage cycle with the brake disc that has usage marks from the previous brake pads

CARBON FIBER
- protection from critical overheat during extreme braking
- increases the integrity of the pad by 25-30%

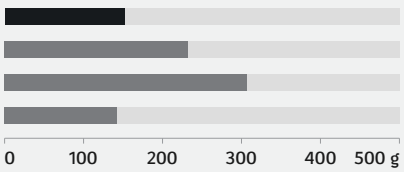
CARBON LINE disc brake pads made by **TRIBO** are recommended for fitting on commercial vehicles with increased load as well as on vehicles that work actively in mountain conditions.

BRAKE PAD WEAR COMPARISON *



TRIBO	**5.812 mm**
Original equipment (OE)	6.409 mm
Premium aftermarket	8.457 mm
Budget aftermarket	14.771 mm

BRAKE DISC WEAR COMPARISON *



TRIBO	**151.9 g**
Original equipment (OE)	232.1 g
Premium aftermarket	306.5 g
Budget aftermarket	142.6 g

* the tests are performed in accordance with ISO 26866 using the inertial dyno stand that imitates full load of a vehicle
